

CDM IN FIJI

Peremo Caginivula

Principal Consultant Carbon Fiji

Economic Drivers and Trade potential

Along with this exponential growth in Compliance trading is an even faster growth in Voluntary credit trading. Fiji is now in the best possible position to take advantage of this emerging market.

Income from carbon projects can provide the much needed capital for social infrastructure development leading to greater social equity.

To achieve this outcome there needs to be a strong working relationship between the investors, resource owners and relevant governmental agencies.

Economic Drivers and Trade potential

Why is Fiji in a strategic position?

- 1. No transport logistics – direct to market. e.g., Compete on same terms as all other nations.**
- 2. Natural resource wealth. Forest, land, renewable, sustainable and low emission energy sources..**
- 3. Biodiversity (High endemism).**

Local CDM-Project

- FEA project-Wainikasou & Vaturu Dam
- Traded by Sustainable Energy Limited (SEL)
- SEL is a JV between FEA & Pacific Hydro –(Australian interest)
- Eco-security provided PDD and Trade the CER to ABN Ambro (UK investment bank)
- Total CER traded 24,928mtCO₂e
- In today's price approx. US750k *pa*
